

TECHNICAL SKILLS

Languages: Go (Primary), TypeScript, Python
Frameworks: Go (Gin, Fiber), Node.js, FastAPI, React, Next.js, Zustand
Databases: PostgreSQL, MongoDB, Redis, DynamoDB, SQL
Cloud: Docker, Kubernetes (K8s), Jenkins (CI/CD), Linux, Shell Scripting
AI / LLM : LangChain, LangGraph, RAG, MCP, AI Agents, Vector Search

EXPERIENCE

Software Development Engineer Sept 2025 – May 2026
UPDOT Bengaluru, India

- Developed distributed **microservices** in **Go (Gin)** for core accounting workflows on a cloud-based accounting platform, worked on **API design**, business logic, and data correctness across multiple service boundaries.
- Architected a modular layered backend service with **dependency injection** and clean separation of concerns, significantly improving service maintainability, scalability, and testability.
- Built and owned a large-scale eCommerce backend platform by extending Shopify and Webkul APIs, developing custom product, analytics, and dashboard systems with RBAC while following OpenAPI 3.0 specifications.
- Engineered a scalable **NLP-based product search** system using **PostgreSQL GIN**/trigram indexes, **semantic query** matching, and **Redis caching**, reducing query latency by nearly 60% while supporting catalogs exceeding 1M+ records and improving search consistency across synonymous queries.
- Designed an **event-driven architecture** using **Node.js**, **Hono**, **Kafka**, and **webhook-based synchronization** pipelines to coordinate distributed services, trigger asynchronous events, and power real-time data sync, analytics, and platform extensibility through 100+ production-grade APIs.

Full Stack Developer Oct 2024 – Sept 2025
SUNSHINE COSMA Birmingham, UK

- Re-architected the real-time video conferencing infrastructure using **Mediasoup (SFU)** and **Socket.IO** with Redis Pub/Sub signaling, **reducing latency by 30%** and increasing concurrent **viewer capacity by over 2x**.
- Built a multi-author blog management system using **Sanity CMS** with **Algolia-powered real-time search** indexing, enabling significantly faster blog discovery and filtering compared to native Sanity dashboard search.
- Implemented **webhook-based synchronization pipelines** within Sanity to automatically update Algolia indexes for changing blog content, facets, and metadata, ensuring low-latency and consistent search experiences across the platform.
- Developed an **OTP-based authentication** system using **Firebase Auth**, Next.js, Drizzle ORM, and **PostgreSQL** with secure session and token management.

PROJECTS

- Exchange Latency Visualizer** | *Nextjs, Threejs, Zustand, Recharts*  
- Dashboard to visualize real-time latency between exchange and bot servers along with historical trends.
- Geo Guesser Game** | *Next.js, PostgreSQL, WebSockets* 
- A Geo-guessing game (multiplayer) with real-time lobbies, session management, and live leaderboards.
- Caching Proxy** | *C, Multithreading, Networking, Systems Programming* 
- A multithreaded HTTP caching proxy written in C, handles up to 400+ concurrent clients, utilizes LRU caching.

COMPETITIVE PROGRAMMING

- ACM ICPC 2023:** Ranked **127th** in Regional onsite round; Qualified with All India Rank **277th** in preliminaries among 10,000+ teams.
- Meta Hacker Cup:** Qualified for **Round 2** of the global competition, placing in the **top 3%** of participants worldwide.
- CodeChef:** Ranked **1st** out of 9,965 participants in March Long 2022 (Div. 4); **96th** among 17,899 in February Long 2022 (Div. 3). Current rating: **1643**.
- LeetCode:** Rating **1708**.

EDUCATION

Visvesvaraya Technological University Dec 2020 – May 2024
Bachelor of Engineering in Information and Computer Science (GPA: 8.20 / 10.00) Bengaluru, Karnataka
